			,				

#### INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/SE98/00500

V.	Resoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
	citations and explanations supporting such statement

1.	Statement			:
	Novelty (N)	Claims Claims	1-10	YES NO
	Inventive step (IS)	Claims Claims	1-10	YES NO
	Industrial applicability (IA)	Claims Claims	1-10	YES NO

#### 2. Citations and explanations

The claimed invention relates to a method and a device for characterisation of physical and/or chemical properties of a liquid. According to the invention one dependent physical and/or chemical property of a liquid is measured as a function of temperature and a component concentration as independent variable. The component concentration and temperature determined. The value of the component concentration is changed and a representative number of measurements of the dependent physical or chemical property are performed within a selected temperature range within the predetermined change of component concentration. The procedure is repeated at desired component concentrations and temperatures in order to obtain a wanted number of values. Obtained values are visualised in a three-dimensional diagram.

Documents cited in the International Search Report:

WO 9202824

US 4810286

US 4122343

GB 2300272

GB 2268276

WO 92/02824, US 4122343, and US 4810286, closest to the invention, describes processes where parameters are measured and plotted on a diagram. The diagram is indicative for the processed product.

GB 2300272 and GB 2268276 describes methods and apparatus for determining a property by measuring and plotting density resp change in volume as a function of temperature in a graph. The property is determined by observing an inflexion in the established graph.

#### INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/SE98/00500

Supplemental Box

(To be used when the space in any of the preceding boxes is not sufficient)

## Continuation of: V

None of the documents describes a method and a device for characterisation of physical and/or chemical properties of a liquid where one dependent physical and/or chemical property of a liquid is measured as a function of both temperature and component concentration where the temperature and component concentration are controlled within selected ranges in order to obtain a wanted number of values.

According to the method and the device several dependent physical and/or chemical properties can be measured simultaneously in the cell at the same temperature and component concentration. The temperature and component concentration are varied in a predetermined fashion and at all desired measuring points so that one or several properties can be measured.

Accordingly, the claimed invention fulfil the requirements of novelty (N), inventive step (IS) and industrial applicability (IA).
